DETAILED ACTION

Remark

- This Office Action is in response to applicant's amendment filed on October 15, 2002, which has been entered as paper number 21.
- By this amendment, the applicant has amended claims 1, 6-8, 13,14, 16, 20, 21, 27-30, 45-47, 50-54 and 56 and has canceled claims 41-43.
- Claims 1-40, and 44-60 remain pending in this application.

Election/Restrictions

- 1. Applicant's election of species II (Figure 6) in Paper No. 21 is acknowledged. Because applicant did not distinctly and specifically point out the supposed errors in the restriction requirement, the election has been treated as an election without traverse (MPEP § 818.03(a)). Applicant fails to give convincing arguments concerning why would the species II (Figure 6) is generic to species I (Figure 3) and species III (Figure 10).
- 2. The following claims read on the elected species II (Figure 6): claims 1-2, 4-6, 8-9, 11-13, 19-25, 38-40, and 44-60.
- 3. Claims 3, 7, 10, 14, 15-18 and 26-37 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected species, there being no allowable generic or linking claim. Election was made without traverse in Paper No. 21.
- 4. The rejections to claims 45 and 50-51 under 35 USC 112, first paragraph, set forth in the previous Office Action are withdrawn.

Claim Rejections - 35 USC § 112

5. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

6. Claims 47, 51, and 53 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

The phrase "which provides at least half of the refractive power" recited in the claims are confusing and in errors. It is not clear how does the refractive power is measured so that "half" of such power is defined.

Claim Rejections - 35 USC § 103

- 7. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
 - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 8. Claims 1, 4-5, 8, 11-12, 45-48, 50-54, 55-56, and 57-60 are rejected under 35 U.S.C. 103(a) as being unpatentable over the patent issued to Ogata (PN. 5,982,544).

Ogata teaches a lens system that is comprised of a plurality of lenses (Figure 7) with an aspherical lens (the fifth lens from the object side) wherein a diffractive optical element is formed on the aspherical lens, (please see Figure 7 and column 11, lines 13-40). The diffractive optical element is designed to correct chromatic aberrations.

This reference teaches that the lens system is a zoom lens system but does not teach explicitly that is a projection lens system. However it is standard practice in the art to utilize a zoon lens system in a projection lens system. It therefore has been held that a recitation with respect to the manner in which a claimed apparatus is *intended to be employed* does not differentiate the claimed apparatus from a prior art apparatus satisfying the claimed structural limitations. Ex parte Madham, 2 USPQ2d 1647 (1987).

With regard to claims 4 and 11, Ogata teaches that the diffractive optical element has a positive refractive power, (please see Figure 1). With respect to claims 5 and 12, this reference does not teach explicitly that the diffractive optical element has a negative refractive power. However, since the specification fails to teach the criticality of having this negative power would overcome any problem in the prior art such modifications are considered to be obvious matters of design choice to one skilled in the art.

With regard to claims 45-46, 50 and 52, Ogata teaches that the aspherical lens is made of plastic and it is standard knowledge in the art that an aspherical lens will correct spherical aberration in the lens system. With regard to claims 48 and 54, Ogata teaches that various aberrations including astigmatism and distortion are corrected by the lens system.

With regard to claims 47, 51 and 53, Ogata teaches that the lens system has lens element made of glass but it does not teach explicitly that the half of the refractive power is provided by glass material. However such feature is not clearly defined and it cannot be examined in details. It is however well known in the art that diffractive optical element are general designed to correct the aberration caused by the glass material in the optics system.

With regard to claims 57-60, Ogata teaches that the pitch of the groove for the diffractive optical element may be changed across the element (Figure 2), although it does not teach explicitly about the change being increasing or decreasing as it moves from the center to peripheral, however it is known in the art that different design of the groove will give rise to different optical properties of the diffractive optical element and since the specification fails to teach the criticality of having particular design would overcome any problem in the prior art such modification is considered to be obvious matter of design choices to one skilled in the art.

9. Claims 1, 8, 44 and 49 are rejected under 35 U.S.C. 103(a) as being unpatentable over the patent issued to Chipper (PN. 5,493,441).

Chipper teaches a lens system that is comprised of a plurality of lenses (Figure 1) with an aspherical lens (1, Figure 1) wherein a diffractive optical element is formed on the aspherical lens, (please see Figure 1 and column 3, lines 60-64). The diffractive optical element is designed to correct chromatic aberrations. Chipper teaches that the front surface of the first lens is spherical.

This reference teaches that the lens system is a zoom lens system but does not teach explicitly that is a projection lens system. However it is standard practice in the art to utilize a zoon lens system in a projection lens system. It therefore has been held that a recitation with respect to the manner in which a claimed apparatus is *intended to be employed* does not differentiate the claimed apparatus from a prior art apparatus satisfying the claimed structural limitations. Ex parte Madham, 2 USPQ2d 1647 (1987).

10. Claims 2, 6, 9 and 13 are rejected under 35 U.S.C. 103(a) as being unpatentable over the patent issued to Ogata as applied to claims 1 and 8 above, and further in view of the patent issued to Meyers et al (PN. 5801,889).

The lens system taught by **Ogata** as described for claims 1 and 8 above has met all the limitations of the claims. Ogata teaches that the diffractive optical element may have *ring* shape grooves that has rotational symmetry, (please see column 2, lines 35-25). However this reference does not teach explicitly that the diffractive optical element is formed on a spherical surface. **Meyers** et al in the same field of endeavor teach a diffractive optical element formed on an aspherical lens wherein the diffractive optical element is formed on a *spherical surface* (44, Figure 4). Meyers et al also teaches that the diffractive optical element having *rotationally symmetric grooves*. It would then have been obvious to one skilled in the art to apply the teachings of Meyers et al to form the diffractive optical element on the spherical

surface of the aspherical lens for the benefit of providing a specific design for the diffractive aspherical lens.

11. Claims 19-25, 1 and 38-40 are rejected under 35 U.S.C. 103(a) as being unpatentable over the patent issued to Moskovich (PN. 4, 776,681) in view of the patent issued to Ogata (PN. 5,982,544).

Moskovich teaches a projection lens having a *first lens* with positive refractive power in the center and negative refractive power on the peripheral, a *second lens* of positive refractive power, and a *third lens* of positive refractive power lens and a *fourth lens* of negative refractive power, (please see Figure 3). Moskovich teaches that the surfaces of the first lens, third lens and the fourth lens may include *aspherical surfaces*, (please see Table X). This reference met all the limitations of the claims with exception that it does not teach to include a diffractive optical element. **Ogata** in the same filed of endeavor teaches to include a diffractive optical element that particularly can be formed on an aspherical lens to correct the aberrations of the lens system. Ogata teaches that the diffractive/aspherical lens may be made of plastic. It would then have been obvious to one skilled in the art to apply the teachings of Ogata to form a diffractive optical element on an aspherical lens of the lens system of Moskovich for the benefit of correcting the aberrations in the projection lens system.

Response to Arguments

12. Applicant's arguments filed on October 15, 2002 have been fully considered but they are not persuasive. The newly amended claims have been fully considered and they are rejected for the reasons stated above.

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Audrey Y. Chang whose telephone number is 703-305-6208. The examiner can normally be reached on Monday-Friday (8:00-4:30), alternative Mondays off.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor,

Cassandra Spyrou can be reached on 703-308-1637. The fax phone numbers for the organization where
this application or proceeding is assigned are 703-872-9318 for regular communications and 703-8729319 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-308-0956.
